23th August2007

TO: Stephen Wilyman
Chief Executive
Mteq Ltd

Dear Stephen

In May 2007 we commenced an Mteq programme in our field/packing operation in Brazil. As we approach the end of 4th month of this programme I would like to express my appreciation for the great work done by all involved, both from Mteq staff together with ourselves. Furthermore, I take this opportunity to detail a number of the benefits that we believe we will achieve:

- **Management Systems/Control**

Mteq, with the involvement of our staff, have developed management systems that have equipped the management with tools that have enabled them to achieve significant performance improvements in an increasingly competitive environment.

- **Performance**

As a result of the programme our performance levels up to now, have improved compared to last season. Mteq also assisted us in the Organisational Re-alignment of the field operations, and starting now the work on packing facilities to better suit our current and future business needs.

In financial terms I am confident that Mteq together with our team will reach the efficient and saving defined as target.

In summary I would like to say that the key to Mteq's success has been their ability to work effectively and alongside Executives, Managers and Supervisors, to develop ownership of all the systems installed. This will provide us with a critical platform to progress along a path of continuous improvement.

Yours faithfully,

Marcelo Gadelha
