Dear Stephen

Ultra Electronics Controls is a provider of high integrity electronic control systems to the aerospace industry. Our capabilities span the complete product lifecycle; design, development, production and support. We supply a variety of systems encompassing functions such as:

- Active Noise and Vibration Control
- Actuation Control
- Ice Protection
- Landing Gear Control
- Position Sensing and Control
- Propeller Balancing Monitoring
- Propeller Control
- Structural Health Monitoring

I am delighted to report that we have engaged Mteq on a second assignment. The first assignment was successfully completed within Ultra's sonobuoy business several years ago.

Mteq has been tasked to conduct a "Lean" review of the supply chain and processes relating to two of our products, namely PEC (Propeller Electronic Control) and PSDC (Proximity Sensing Data Concentrator).

The review will cover the entire supply chain including customer order, materials flow and handling, stores, despatch, customer service, vendor performance and production. As part of the exercise and in line with our commitment to continuous improvement, we have already uncovered opportunities for change and look forward to discussing a summary of your findings and a detailed implementation plan.

Yours sincerely

A handwritten signature in black ink, appearing to read "Kim Wrighton", written over a horizontal line.
